DETAILED ACTION

Allowable Subject Matter

Claims 46-50 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art search does not reasonably teach the method of forming a pair of isolation structures that define a well region on an SOI substrate, forming a single doped region in the defined well region, and then forming a pair of second doped regions, wherein each of the second doped regions are in contact with a respective isolation region and separated from the first doped region by the well. The primary reason for the allowance of the claims is the inclusion of the limitation "each second type doped region is separated from the first type doped region by the well" in all the claims which is not found in the prior art references.
